

**NAME:** Resume Analyzer  
**DATE:** June 13, 2025 9:57 PM  
**DESCRIPTION OF TECHNOLOGY**  
The project uses BERT and RoBERTa-based NLP models to detect key parts of a resume and provide feedback for improvement. The model helps automate and standardize resume review, making the process faster and more consistent. Expectations are realistic: it gives suggestions, not perfect results. Tests on example data confirm that the outputs match expectations.

**HUMAN VALUES**  
The technology aims to empower users by helping them present themselves more clearly and professionally. It does not impose beliefs or stigmatize but may shift the role of resume reviewers from humans to automated assistance. It supports how users want to be perceived and can boost confidence.

**TRANSPARENCY**  
The project explains the goal - to help improve resumes - but does not fully detail how the model works or why it gives specific feedback. There is no business model yet, as this is a prototype. More transparency would be needed in a real deployment.

**IMPACT ON SOCIETY**  
The challenge is that many job applicants submit resumes that lack clarity, structure, or key information, making it harder for them to stand out. This creates a problem for both applicants and recruiters. The technology aims to help applicants improve their resumes and increase their chances. It is a real problem, as poor resumes reduce opportunities and slow hiring. Solving it can support fairer and more efficient job applications.

**STAKEHOLDERS**

- Job applicants
- Recruiters/HR staff
- Employers
- Developers/maintainers
- Regulators

**SUSTAINABILITY**  
The project does not yet optimize for energy efficiency, as it is a prototype. However, using pre-trained models like BERT reduces training energy costs. Future improvements could include using lighter models or shared cloud resources to lower energy use.

**HATEFUL AND CRIMINAL ACTORS**  
The technology could be misused to generate or modify resumes with false information that looks more convincing, enabling fraud or identity theft. There is also a risk of privacy issues if sensitive resume data is not handled securely.

**DATA**  
The project is aware that data can be biased, incomplete, or subjective. The model is tested on diverse examples to spot obvious bias, but limitations remain. The technology provides guidance, not absolute judgments, to account for data imperfections.

**FUTURE**  
If widely adopted, the technology could influence how resumes are written, pushing standard formats or language styles. This might improve clarity but risk reducing diversity in how people present themselves. It could also shift more resume screening to automated systems.

**PRIVACY**  
Yes, the technology processes personal data from resumes, such as names, contact details, work history, education, and skills. This data must be handled carefully to comply with privacy laws like GDPR.

**INCLUSIVITY**  
The technology may reflect bias present in the training data, such as favoring certain resume formats, language styles, or job histories common in specific regions or industries. Efforts are made to test on varied examples, but full elimination of bias is challenging and must be monitored.

**DESCRIPTION OF TECHNOLOGY**  
The project uses BERT and RoBERTa-based NLP models to detect key parts of a resume and provide feedback for improvement. The model helps automate and standardize resume review, making the process faster and more consistent. Expectations are realistic: it gives suggestions, not perfect results. Tests on example data confirm that the outputs match expectations.

**IMPACT ON SOCIETY**

**What is exactly the problem? Is it really a problem? Are you sure?**  
  
Can you exactly define what the challenge is? What problem (what 'pain') does this technology want to solve? Can you make a clear definition of the problem? What 'pain' does this technology want to ease? Whose pain? Is it really a problem? For who? Will solving the problem make the world better? Are you sure? The problem definition will help you to determine...

**HATEFUL AND CRIMINAL ACTORS**

**In which way can the technology be used to break the law or avoid the consequences of breaking the law?**  
  
Can you imagine ways that the technology can or will be used to break the law? Think about invading someone's privacy. Spying. Hurting people. Harassment. Steal things. Fraud/identity theft and so on. Or will people use the technology to avoid facing the consequences of breaking the law (using trackers to evade speed radars or using bitcoins to launder...

**PRIVACY**

**Does the technology register personal data? If yes, what personal data?**  
  
If this technology registers personal data you have to be aware of privacy legislation and the concept of privacy. Think hard about this question. Remember: personal data can be interpreted in a broad way. Maybe this technology does not collect personal data, but can be used to assemble personal data. If the technology collects special personal data (like...

**HUMAN VALUES**

**How is the identity of the (intended) users affected by the technology?**  
  
To help you answer this question think about sub questions like:  
  
- If two friends use your product, how could it enhance or detract from their relationship?  
- Does your product create new ways for people to interact?...

**STAKEHOLDERS**

**Who are the main users/targetgroups/stakeholders for this technology? Think about the intended context by...**  
  
When thinking about the stakeholders, the most obvious one are of course the intended users, so start there. Next, list the stakeholders that are directly affected. Listing the users and directly affected stakeholders also gives an impression of the intended context of the technology.  
...

**DATA**

**Are you familiar with the fundamental shortcomings and pitfalls of data and do you take this sufficiently into...**  
  
There are fundamental issues with data. For example:  
  
- Data is always subjective;  
- Data collections are never complete;  
- Correlation and causation are tricky concepts;  
- Data collections are often biased;...

**INCLUSIVITY**

**Does this technology have a built-in bias?**  
  
Do a brainstorm. Can you find a built-in bias in this technology? Maybe because of the way the data was collected, either by personal bias, historical bias, political bias or a lack of diversity in the people responsible for the design of the technology? How do you know this is not the case? Be critical. Be aware of your own biases....

**TRANSPARENCY**

**Is it explained to the users/stakeholders how the technology works and how the business model works?**  
  
- Is it easy for users to find out how the technology works?  
- Can a user understand or find out why your technology behaves in a certain way?  
- Are the goals explained?  
- Is the idea of the technology explained?  
- Is the technology company transparent about the way their...

**SUSTAINABILITY**

**In what way is the direct and indirect energy use of this technology taken into account?**  
  
One of the most prominent impacts on sustainability is energy efficiency. Consider what service you want this technology to provide and how this could be achieved with a minimal use of energy. Are improvements possible?

**FUTURE**

**What could possibly happen with this technology in the future?**  
  
Discuss this quickly and note your first thoughts here. Think about what happens when 100 million people use your product. How could communities, habits and norms change?
